

Sanitization Services With Spray Technology

As a leading provider of industrial services, we are ready to be your partner during these uncertain times.

Sanitization and disinfection of facility surfaces for the prevention of diseases and infections such as:

- Coronavirus
- E.Coli
- Staphylococci
- Herpes
- Influenza
- Legionella
- Listeria
- Rotavirus
- Salmonella
- HIV

One of the fundamental characteristics of spray sanitization is that the disinfectant is dispersed under pressure, generating a dew on surfaces and eliminating or neutralizing up to 99% of germs, microorganisms, viruses and bacteria that are harmful to health.

PRODUCT CHARACTERISTICS

- Very low or no health risk
- No skin irritability at the time of application
- Very low eye irritability at the time of application
- Non-Flammable
