

End-to-end solution for fluid management 4.0

Pan-European Leadec and Castrol partnership

As strong partners, Leadec and Castrol offer their customers a complete fluid management package by pooling their extensive experience in the fields of lubricants and manufacturing services. As a user, you benefit from standardized on-site services, a broad portfolio of lubricants as well as adjacent services such as digital condition monitoring and predictive maintenance of plant and equipment.

Your benefits

Optimum fluid management reduces the consumption of water, lubricants and energy, among others. At the same time, machine lifetime is extended. This reduces the overall operating costs in production. Our complete package optimizes service structures across factory boundaries and includes data-based services such as predictive maintenance or smart condition monitoring.

Our joint services at a glance

- Engineering and planning of complete fluid management systems
- Know-how about high-performance lubricants (HPL) and metalworking fluids (MWF)
- Total cost of ownership (TCO) audits
- Water, energy and lubricant consumption reduction programs
- Condition monitoring and predictive maintenance

This is what you can rely on

- Standardized approach with a consistent level of service quality
- Local expertise
- Industry expertise in services for the manufacturing industries
- Broad portfolio of industrial lubricants
- Reduction of organizational effort
